Node-RED

- IBM 開發的視覺化 IoT 開發工具
- 以 Node.js 為基礎
- 純粹透過流程圖的方式工作
- 不需要會 Node.js 也可透過 Node-RED 完成後端
- 官網：<https://nodered.org/>

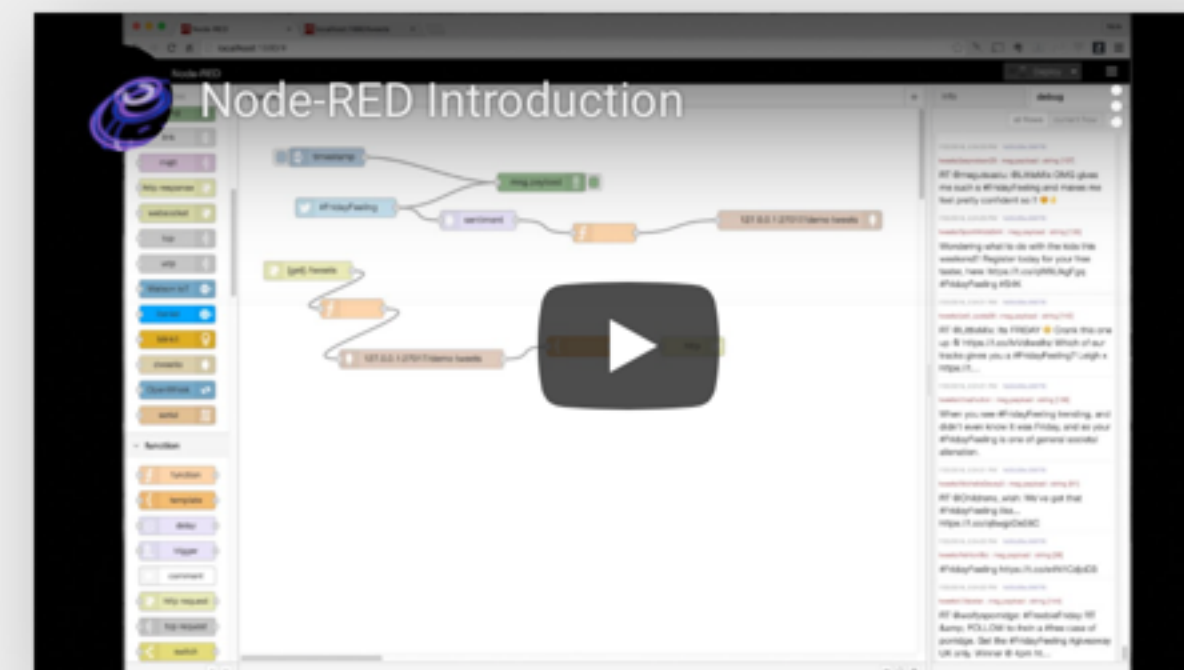

Node-RED

Low-code programming for event-driven applications

Latest version: v1.0.6 (npm)

Node-RED is a programming tool for wiring together hardware devices, APIs and online services in new and interesting ways.

It provides a browser-based editor that makes it easy to wire together flows using the wide range of nodes in the palette that can be deployed to its runtime in a single-click.

安裝 Node-RED

- 安裝 Node.js 完成後，打開終端機
- 輸入 `npm install -g node-red` 就可以完成 Node-RED 的安裝
- 如果是 Mac 前面要加上 `sudo`
- 安裝完成後，只要繼續輸入 `node-red`，就會啟動 Node-RED

啟動 Node-RED

- 打開終端機輸入 `node-red` 就會啟動 Node-RED
- 打開瀏覽器，網址列輸入 `http://127.0.0.1:1880/`，就可以打開 Node-RED
- 左邊是一些功能流程的節點，每個節點都有各自的功能
- 中間的區域就是透過這些節點組成流程圖

Node

Name	SlackHook
Type	http in
ID	40c91d4d.bf36e4

Properties

Provides an input node for http requests, allowing the creation of simple web services.

The resulting message has the following properties:

- msg.req : [http request](#)
- msg.res : [http response](#)

For POST/PUT requests, the body is available under `msg.req.body`. This uses the [Express bodyParser middleware](#) to parse the content to a JSON object.

By default, this expects the body of the request to be url encoded:

foo=bar&this=that

To send JSON encoded data to the node, the content-type header of the request must be set to `application/json`.

Note: This node does not send any response to the http request. This should be done with a subsequent HTTP Response node.
